instructions on how to use the medications and devices, as well as steps to be taken in an acute asthma attack (individual and school Asthma Action Plans)
Appendix 1

In the situation of a first time asthma attack, a student is to be administered four separate puffs of a blue reliever puffer via a spacer and an ambulance is to be called immediately.

Four separate puffs should be given every four minutes until the ambulance arrives.

Reliever puffers are extremely safe, even if the student does not end up having asthma.
